

whereby a set of characteristic values [may be] is defined for respective transmission line segments, having an optimized performance in view of the at least one algorithm.

8. (Amended) The model according to claim 1, wherein the respective characteristic values are [substantially] non-incrementally distributed across a range.

9. (Amended) The model according to claim 1, wherein the respective characteristic values are [substantially] non-monotonically distributed across a range.

17. (Amended) The method according to claim 10, wherein a variation in respective segment characteristics is distributed [substantially] non-incrementally.

18. (Amended) The method according to claim 10, wherein a variation in respective segment characteristics is distributed [substantially] non-monotonically.

25. (Amended) The system according to claim 22, wherein the segmented transmission line comprises an air-spaced coaxial transmission line adapted for transmitting an RF signal, the characteristic value being a length of a respective transmission line segment, the optimized respective characteristic values being [substantially] non-incrementally and non-monotonically distributed across a range.

REMARKS

Claims 1-25 are in the application.

Claims 1, 8, 9, 17, 18 and 25 are amended.

Respectfully Submitted,

Steven M. Hoffberg
Reg. 33,511
